## IOB-UART, a RISC-V UART

USER GUIDE, V0.1, BUILD 8E3507F

## **List of Figures**

1	IP Core Symbol	5
2	High-level block diagram	7

#### 1 Introduction

The IObundle UART is a RISC-V-based Peripheral written in Verilog, which users can download for free, modify, simulate and implement in FPGA or ASIC. It is written in Verilog and includes a C software driver. The IObundle UART is a very compact IP that works at high clock rates if needed. It supports full-duplex operation and a configurable baud rate. The IObundle UART has a fixed configuration for the Start and Stop bits. More flexible licensable commercial versions are available upon request.

### 2 Symbol

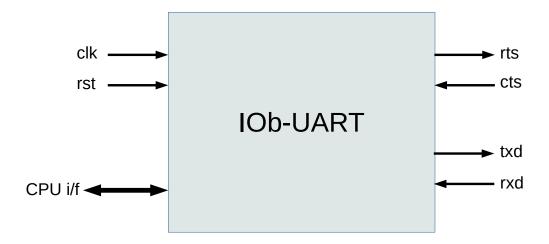

Figure 1: IP Core Symbol

#### 3 Features

- Supported in IObundle's RISC-V IOb-SoC open-source and free of charge template.
- IObundle's IOb-SoC native CPU interface.
- · Verilog basic UART implementation.
- · Soft reset and enable functions.
- Runtime configurable baud rate
- C software driver at the bare-metal level.
- Simple Verilog testbench for the IP's *nucleus*.
- System-level Verilog testbench available when simulating the IP embedded in IOb-SoC.
- · Simulation Makefile for the open-source and free of charge Icarus Verilog simulator.
- FPGA synthesis and implementation scripts for two FPGA families from two FPGA vendors.
- · Automated creation of FPGA netlists

- Automated production of documentation using the open-source and free Latex framework.
- IP data automatically extracted from FPGA tool logs to include in documents.
- · Makefile tree for full automation of simulation, FPGA implementation and document production.
- AXI4 Lite CPU interface (premium option).
- Parity bits (premium option).

#### 4 Benefits

- Compact and easy to integrate hardware and software implementation
- Can fit many instances in low cost FPGAs and ASICs
- · Low power consumption

#### 5 Deliverables

- ASIC or FPGA synthesized netlist or Verilog source code, and respective synthesis and implementation scripts
- ASIC or FPGA verification environment by simulation and emulation
- · Bare-metal software driver and example user software
- · User documentation for easy system integration
- Example integration in IOb-SoC (optional)

## 6 Block Diagram and Description

A high-level block diagram of the core is presented in Figure 6 and a brief explanation of each block is given in Table 1.

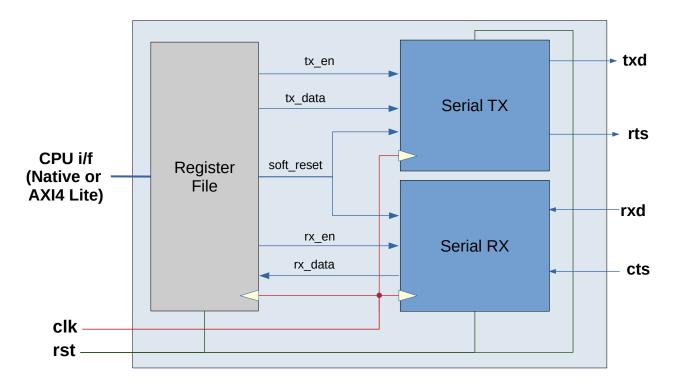

Figure 2: High-level block diagram

Block	Description
Register File	Holds the current configuration of the UART as well as internal parameters. Data to be sent or that has been received is stored here temporarily.
Serial TX	After enabled, this block serializes the data previously written to the tx_data register by the CPU, and sends the data word over the single transmit line connected to output txd.
Serial RX	After enabled, this block deserializes the data in the incoming single transmit line connected to pin txd, and writes a data word to the rx_data register for the CPU to read.

Table 1: Block descriptions.

## 7 Synthesis Parameters

## 8 Interface Signals

The interface signals of the core are described in the following tables.

Name	Direction	Width	Description	
clk	input	1	System clock input	
rst	input	1	System reset asynchronous and active high	

Table 2: General Interface Signals

Name	Direction Width		Description			
valid	input	1	Native CPU interface valid signal			
address	input	ADDR_W	Native CPU interface address signal			
wdata	input	WDATA_W	Native CPU interface data write signal			
wstrb	input	DATA_W/8	Native CPU interface write strobe signal			
rdata	output	DATA_W	Native CPU interface read data signal			
ready	output	1	Native CPU interface ready signal			

Table 3: CPU Native Slave Interface Signals

Name	Direction	Width	Description		
s_axil_awaddr	input	ADDR_W	Address write channel address		
s_axil_awcache	input	'AXI_CACHE_W	Address write channel memory type. Transactions set with		
			Normal Non-cacheable Modifiable and Bufferable (0011).		
s_axil_awprot	input	'AXI_PROT_W	Address write channel protection type. Transactions set with		
			Normal Secure and Data attributes (000).		
s_axil_awvalid	input	1	Address write channel valid		
s_axil_awready	output	1	Address write channel ready		
s_axil_wdata	input	DATA_W	Write channel data		
s_axil_wstrb	input	DATA_W/8	Write channel write strobe		
s_axil_wvalid	input	1	Write channel valid		
s_axil_wready	output	1	Write channel ready		
s_axil_bresp output		'AXI_RESP_W	Write response channel response		
		1	Vrite response channel valid		
s_axil_bready	input	1	Write response channel ready		
s_axil_araddr	input	ADDR_W	Address read channel address		
s_axil_arcache	input	'AXI_CACHE_W	Address read channel memory type. Transactions set with		
			Normal Non-cacheable Modifiable and Bufferable (0011).		
s_axil_arprot	input	'AXI_PROT_W	Address read channel protection type. Transactions set with		
			Normal Secure and Data attributes (000).		
s_axil_arvalid	s_axil_arvalid input		Address read channel valid		
s_axil_arready output 1		1	Address read channel ready		
s_axil_rdata	output	DATA_W	Read channel data		
s_axil_rresp	output	'AXI_RESP_W	Read channel response		
s_axil_rvalid	output	1	Read channel valid		
s_axil_rready	input	1	Read channel ready		

Table 4: CPU AXI4 Lite Slave Interface Signals

Name	Direction	Width	Description	
interrupt	output	1	to be done	
txd	output	1	Serial transmit line	
rxd	input	1	Serial receive line	
cts	input	1	Clear to send the destination is ready to receive a transmission sent by the UART	
rts	output	1	Ready to send the UART is ready to receive a transmission from the sender.	

Table 5: RS232 Interface Signals

## **Timing Diagrams**

#### **Registers** 10

The software accessible registers of the core are described in Table 6. The table gives information on the name, read/write capability, word aligned addresses, used word bits, and a textual description.

Name	R/W	Addr	Bits	Initial Value	Description
UART_SOFTRESET	W	0x00	0:0	0	Bit duration in system clock cycles.
UART_DIV	W	0x04	15:0	0	Bit duration in system clock cycles.
UART_TXDATA	W	0x08	7:0	0	TX data
UART_TXEN	W	0x0c	0:0	0	TX enable.
UART_TXREADY	R	0x10	0:0	0	TX ready to receive data
UART_RXDATA	R	0x14	7:0	0	RX data
UART_RXEN	W	0x18	0:0	0	RX enable.
UART_RXREADY	R	0x1c	0:0	0	RX data is ready to be read.

Table 6: Software accessible registers.

#### **Software Components** 11

## **FPGA Resources**

Resource	Used
LUTs	100
Registers	112
DSPs	0
BRAM	0

Resource	Used
ALM	88
FF	124
DSP	0
BRAM blocks	0
BRAM bits	0
